Allowable Subject Matter

1. Claims 1-40 are allowed.
2. The following is an examiner's statement of reasons for allowance:

Although the prior art is replete with teachings of regulated flexible heaters, the prior art does not teach to one of ordinary skill in the art, and in combination with the other limitations of the independent claims, a regulated flexible heater comprising a set point resistor and a comparator circuit element to compare the resistance of the temperature dependent variable resistance pathway with the set point resistor and transmits the condition of the relative resistance for these two components to a control circuit element to activate or deactivate the conductive resistance pathway. The instant application deemed to be directed to non-obvious improvement over the invention patented in Pat. No. 6,768,086. The improvement over 6,768,086 comprises a means for activating and deactivating the conductive resistance pathway.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ueda (US4485296) relates to an automatic temperature control device for an electric appliance such as an electric blanket, Matsuo (US4598195) relates to safety temperature circuit including zero crossing detector, Endo (US4656334) relates to bed warmer with a body temperature sensor for stopping a higher preset temperature, Wallgren (US4855572) relates to heater for use either primary or auxiliary heat source and improved circuitry for controlling the
